Full-Stack Developer

React 19 · TypeScript · Express · Prisma · TanStack Query · Zod · Tailwind CSS 4

Full-Stack Developer specialized in React and TypeScript. I build complete multi-tenant SaaS applications - from database schema to pixel-perfect UI - with automated testing, WCAG 2.2 AA accessibility, and CI/CD. Experienced in secure JWT authentication, screaming architecture, and shared Zod contracts across the stack.

Projects

EchoLog - Multi-tenant Customer Feedback SaaS

[Demo](#) · [Repo](#)

Multi-tenant SaaS with workspace isolation and roles (owner/admin/member/viewer).

- Screaming architecture with 9 business domains - 34 Zod schemas shared as single source of truth across the monorepo.
- JWT in httpOnly cookies with role-based middleware, 4-tier rate limiting, CSP headers, sanitize-html on all inputs.
- Public workspace discovery, invitation system with email + accept/decline, board approval flow, in-app notifications with bell dropdown and history page.
- State separation with TanStack Query (server cache, optimistic updates with rollback) and Zustand (UI state).
- Mobile-first responsive design with dark mode, sidebar drawer, bottom-sheet modals, and WCAG 2.2 AA complete.
- Structured logging with Pino, zero console.log, ESLint rule ban against raw SQL.
- 497 tests (Vitest + RTL + Playwright), CI/CD with GitHub Actions, deployed on Vercel + Render + Supabase.

Nexus Talent - AI-assisted Recruitment

[Demo](#) · [Repo](#)

Web app that transforms job descriptions into structured skill matrices and outreach messages.

- Social auth with Supabase (Google). Custom zero-dependency JWT - crypto.createHmac, manual cookie parsing, one-time code OAuth.
- AI proxy server-side - Groq API key never reaches the browser, Zod validation on every response with timeout and retry logic.
- 5-workspace pnpm monorepo with shared Zod schemas as single source of truth between frontend and backend.
- Dark-first design system (Indigo + Chartreuse, OKLCH), responsive UI, Framer Motion animations.
- GEO/SEO foundation: JSON-LD schema, Open Graph, llms.txt, canonical URLs, AI crawler access in robots.txt.
- 267 tests (Vitest + Playwright) with CI/CD via GitHub Actions and PostgreSQL test containers.

Skills

Frontend: React 19, TypeScript, Tailwind CSS 4, Vite · **Backend:** Node.js, Express.js, Prisma ORM, REST APIs, JWT · **Testing:** Vitest, React Testing Library, Playwright · **State:** TanStack Query, Zustand · **DevOps:** Git, GitHub Actions, Vercel · **Architecture:** Screaming Architecture, Monorepo, Zod contracts
