Full Stack Developer (React / Next.js / Node.js • AI)

Studying Systems Analysis and building my own products as a full stack developer, deployed and with real users. I built Relevy from scratch: 46,000 lines, 21 sprints and 1,119 tests. I work with React 19 and Next.js 15 on the frontend, Node.js and PostgreSQL on the backend. I have three bug fixes merged into third-party open source projects.

Open Source

- **vitest** (17.2k stars), two fixes: in the first, vm pools ran Vite's dependency optimizer over index.html and a dependency that could not be bundled killed the run with exit 1 while every test passed; I traced it back to the commit that introduced it and its author approved the fix. In the second, the module cache killed the run when its directory could not be created, and the maintainer's review led to a design smaller than mine
- **@fastify/cookie**: reply.setCookie() accepted an encode option and silently ignored it. Merged with two maintainer approvals and released in 11.1.5

Projects

Relevy - GEO/SEO Audit Platform Live · Public repo · 1,119 tests

- Built the whole product, from definition to deploy, across 21 sprints using spec-driven development: 278 TS/TSX files, 46,000 lines and 6 analysis engines with scoring calibrated against 14 real URLs
- React 19 and Next.js 15 with a 16-component design system of my own and real contrast testing with axe; backend with Node.js, REST APIs and PostgreSQL, GitHub OAuth, rate limiting shared across serverless instances and SSRF protection with IP range classification
- 1,119 tests across 4 CI jobs, plus an SSR bug I fixed: the mobile drawer portal mounted during render and returned 500 on every page

Nexus Talent - AI-Assisted Recruiting Platform Live · React 19 · Express · Groq · 542 tests

- Integrated a language model API server-side, with the key outside the browser, and validated its output with Zod before it reached the UI
- Provider failures return 502 without leaking internals, with automatic fallback between Groq and Google

EchoLog - Multi-tenant Feedback SaaS Live · Repo · React 19 · TypeScript · PostgreSQL

- Built the system across 18 phases and around 45 PRs, one branch per change with code review on each
- Multi-tenant isolation in the PostgreSQL schema with composite keys and roles, 34 Zod schemas shared between client and server, and a test suite in three layers

Skills

- **Frontend and backend:** JavaScript (ES6+), TypeScript, React 19, Next.js 15, HTML5, CSS3, Tailwind CSS 4 · Node.js, Express, REST APIs, HTTP, authentication, Zod
- **Data and cloud:** PostgreSQL, Prisma, SQL · AWS (EC2, S3, Lambda, RDS)
- **Applied AI:** LLM integration in production with validated output and provider fallback; AI agents daily, with every change reviewed
- **Testing and tooling:** Vitest, React Testing Library, Playwright, axe, TDD · Git with branches and merge, GitHub Actions, Docker, Vercel
- **Python and automation:** a pipeline with Playwright, retries, deduplication and 113 tests

Education

Analista de Sistemas (Systems Analysis) - Da Vinci, Primera Escuela de Arte Multimedial 2025 - present

Certifications

AI Development: from 0 to Production - BIG school 2026 - completed

AWS Fundamentals: Cloud, Serverless and Operations - Commit Academy 2026 - completed

Data Analytics with Python - Talento Tech (GCBA) 2026 - in progress

English C2 - EF SET 2026 - cert.efset.org/8Ng7nC
